

Model 6507 Mode Selector

The 6507 Mode Selector was developed for vessels that require the control station and mode selector to be located in different areas. An example would be where there is limited space below the controls, or where separate controls are required for each engine.

The 6507 has proved especially useful for applications such as sports fishing boats where two side mount controls are installed at the aft console and the mode selector is mounted on the top. The housing is constructed entirely out of bronze, the key pad and lights are waterproof. The underside must be protected from the elements.

Ordering Information

Model Designations:

S4	4 switches and lights
-----------	-----------------------

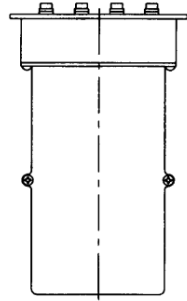

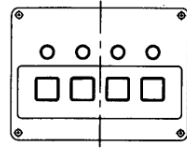

S6	6 switches and lightd
-----------	-----------------------

Available in:

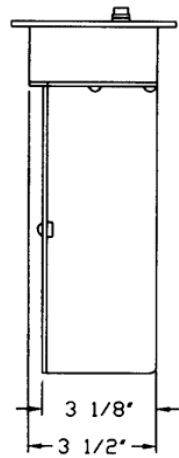

- Black epoxy (as shown)
- Polished Bronze
- Chrome Plated
